Overview:

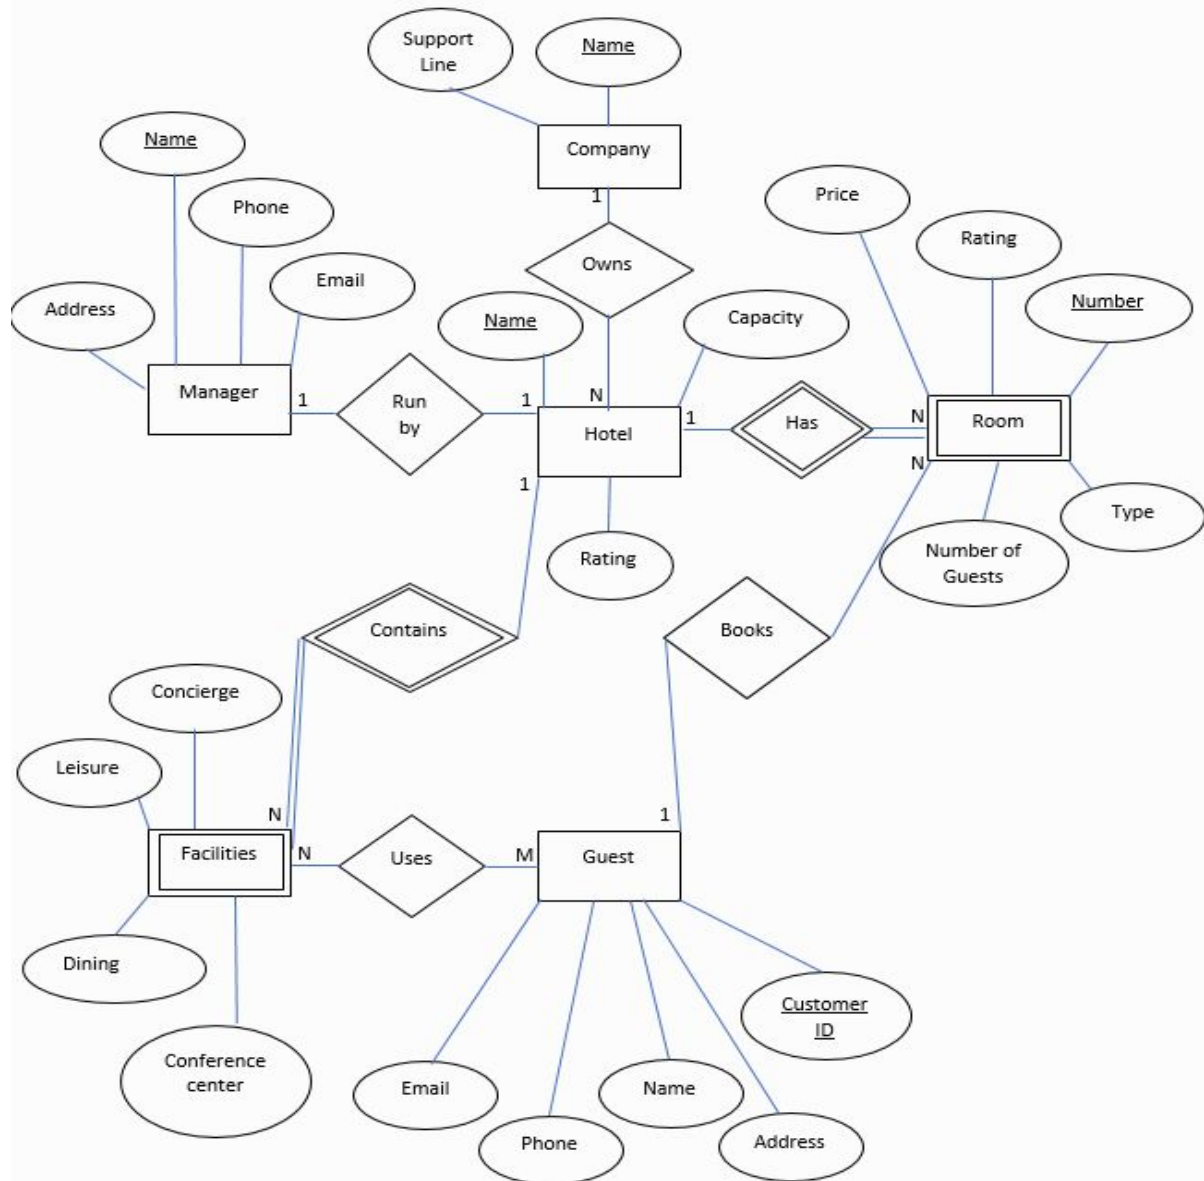

Hoteller* is an free Android application used to find a hotel in an efficient manner. It provides all of the available options and amenities in a fast and easy to use interface that makes booking a hotel as simple as can possibly be.

Hoteller allows the user to sort by hotel name, price and rating and upon finding a suitable hotel and room will temporarily save the room and give the user a number to call the hotel directly. When the user clicks the hotel button, the room will be set to unavailable for any other user. The availability of the room will be reset in set periods (based on discussion with the hotel chains themselves)

System Requirements:

- In order to run Hoteller, users must be running an Android device only as old as Android Version 4.4 (Kitkat) to Android Version 8.0 (Oreo)
- Internet Access

Entity-Relationship Design:

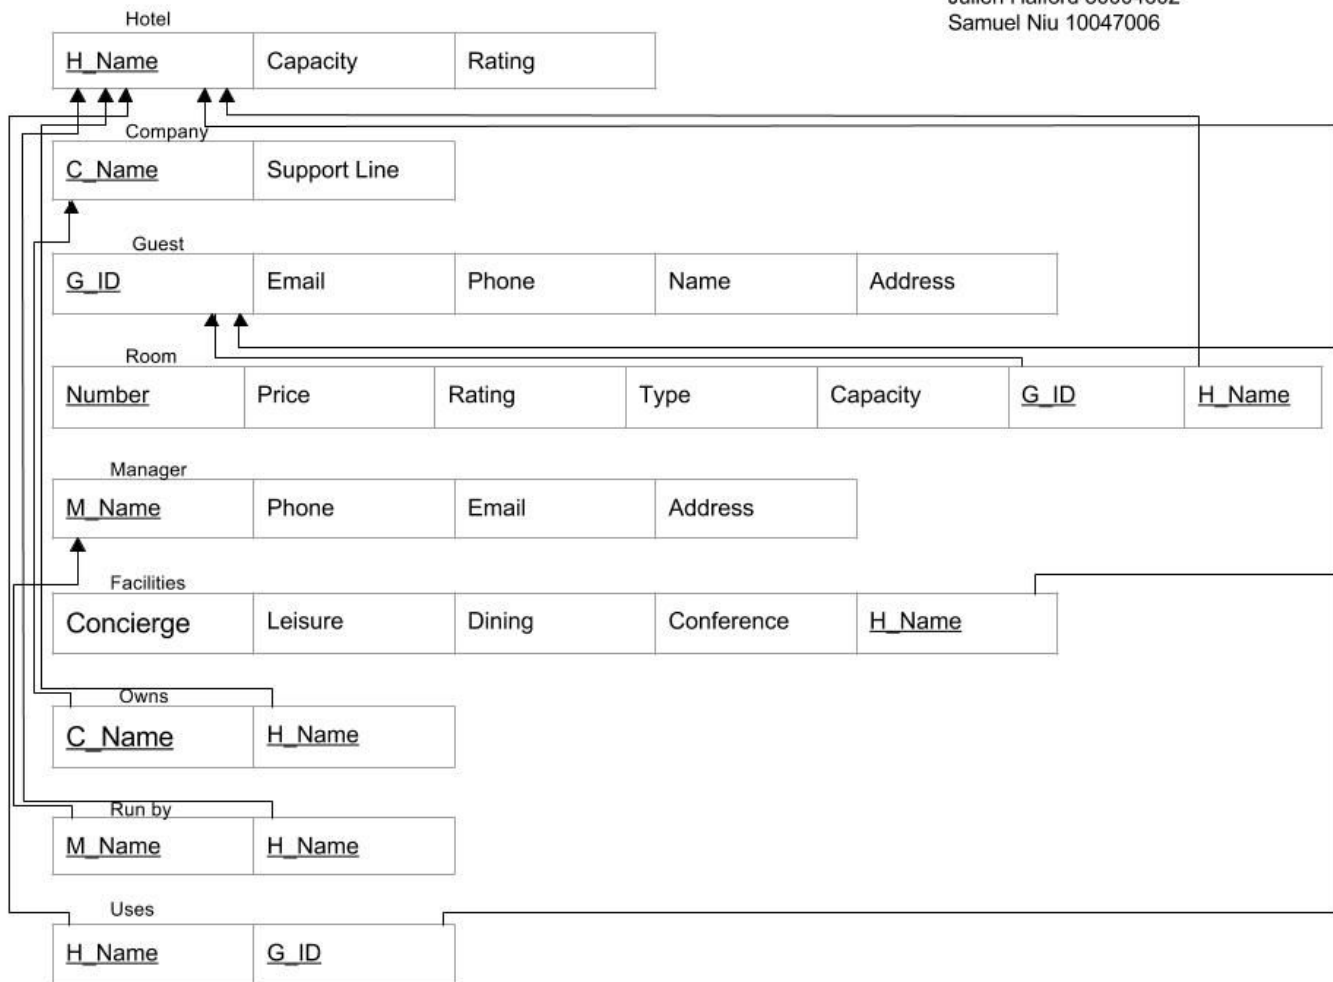

Assumptions:

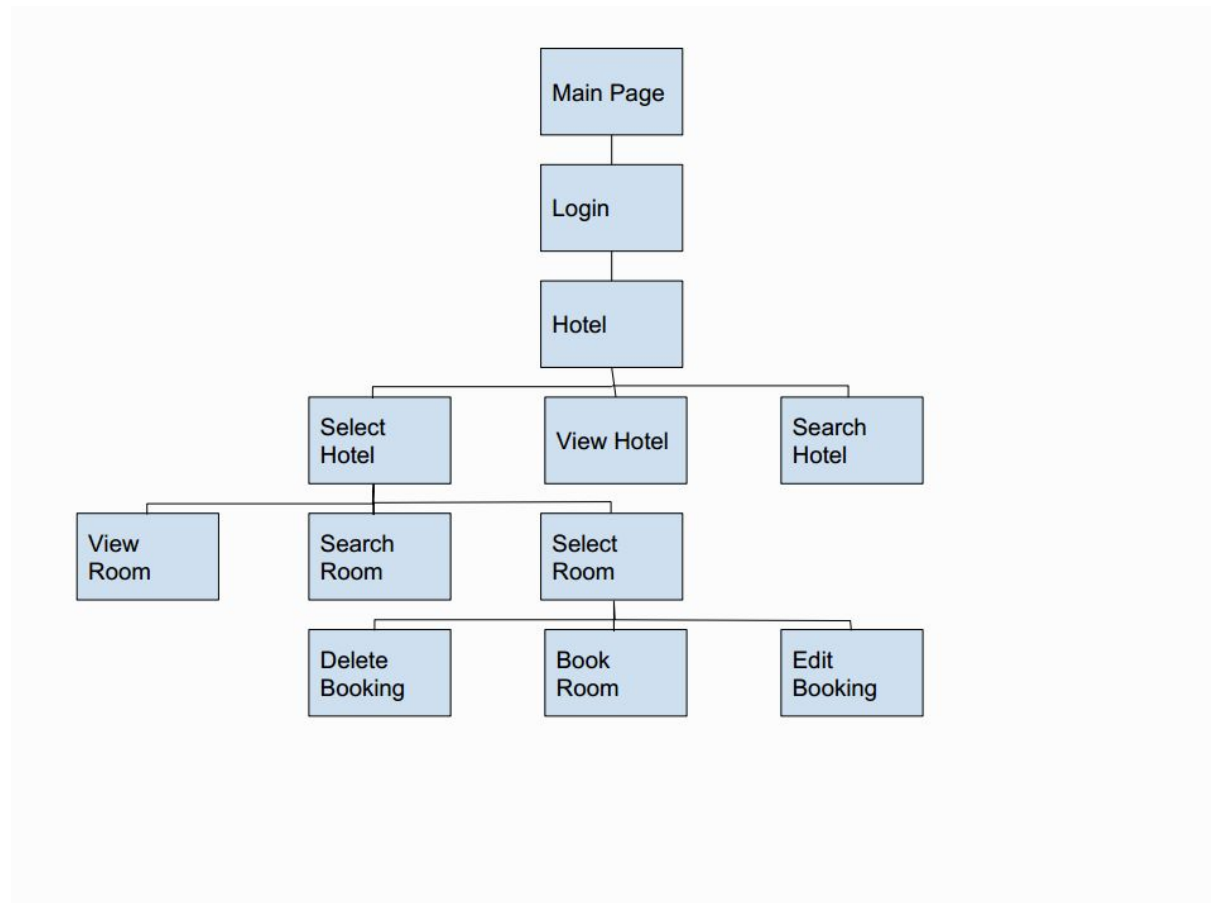

- Each company has only a single name
- Room numbers are not duplicated in different wings or floors
- Each hotel only has a single manager
- Guests are assigned a unique ID number upon booking a room

Logical Database Design:

Julien Halford 30004602
Samuel Niu 10047006

General Hierarchical Structure (HIPO):

HIPO Queries:

Function: Search/View Hotel

Inputs: @H_Name, @Capacity, @Rating

Outputs: H_Name, Capacity, Rating

Pseudocode:

Connect to the database

Query = SELECT h.H_Name, h.Capacity, h.Rating

FROM Hotel as h

WHERE @H_Nname = h.H_Name AND @Capacity = h.Capacity AND

@Rating = h.Rating

Parse Query

Execute Query

Close connection to the Database

Function: Search/View Room

Inputs: @Number, @Price, @Rating, @Type, @Capacity

Outputs: Number, Price, Rating, Type, Capacity

Pseudocode:

Connect to the database

Query = SELECT r.Number, r.Price, r.Rating, r.Type, r.Capacity
FROM Room as r

WHERE @Number = r.Number AND @Price = r.Price AND @Rating = r.Rating AND
@Type = r.Type AND @Capacity = r.Capacity

Parse Query

Execute Query

Close connection to the Database

Function: Book Room

Inputs: @Number, @Price, @Rating, @Type, @Capacity, @G_ID, @Email, @Phone,
@Name, @Address

Outputs: None

Pseudocode:

Connect to the database

Query = INSERT INTO Room(@Number, @Price, @Rating, @Type, @Capacity, @G_ID,
@Email, @Phone, @Name, @Address);

Parse Query

Execute Query

Close connection to the Database

Function: Edit Booking

Inputs: @Number, @Price, @Rating, @Type, @Capacity, @G_ID, @Email, @Phone,
@Name, @Address

Outputs: None

Pseudocode:

Connect to the database

Query = UPDATE Room

SET "attribute"

WHERE (G_ID = @G_ID AND Email = @Email AND Phone = @Phone AND
Name = @Name AND Address = @Address);

Parse Query

Execute Query

Close connection to the Database

Function: Delete Booking

Inputs: @Number, @Price, @Rating, @Type, @Capacity, @G_ID, @Email, @Phone, @Name, @Address

Outputs: None

Pseudocode:

Connect to the database

Query = DELETE FROM Room

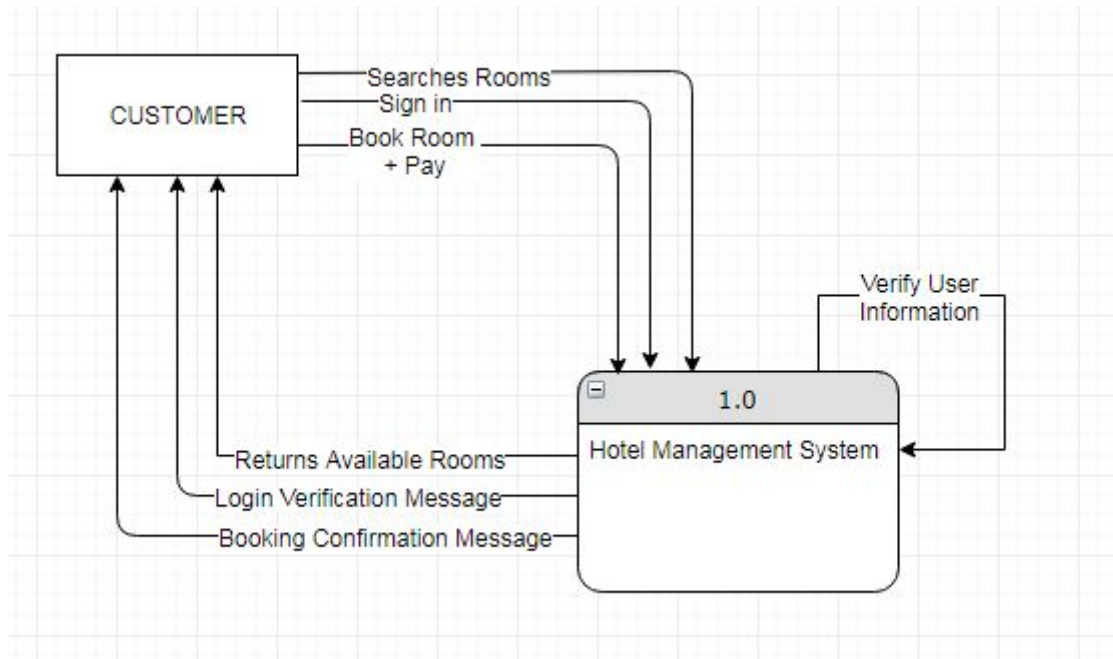

WHERE (G_ID = @G_ID AND Email = @Email AND Phone = @Phone AND
Name = @Name AND Address = @Address);

Parse Query

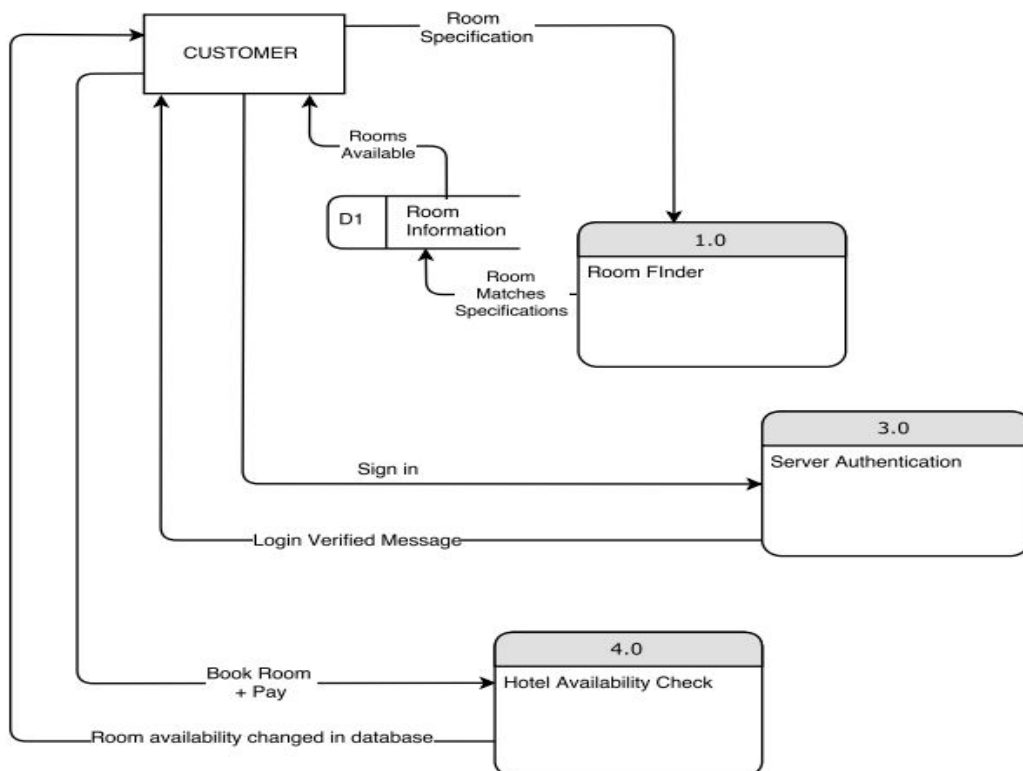

Execute Query

Close connection to the Database

User Manual

1. Login Page – Basic login page. Enter a valid email address and the matching password to enter the application. If the user does not have an account, they can select Register to create one.
2. Registration Page – Enter the required information to create an account. This information is stored for future sign-ins, and used when booking rooms.

The image displays two side-by-side mobile application screens. The left screen is the 'Login Page' for 'HotelCompanion', featuring input fields for 'Email' and 'Password', and buttons for 'SIGN IN' and 'REGISTER'. The right screen is the 'Registration Page', titled 'Please Enter Your Information To Register', with input fields for 'Name', 'Password', 'Email', and 'Address', and a 'COMPLETE REGISTRATION' button. Both screens have a black header bar with the time '8:00' and a standard Android navigation bar at the bottom.

3. Home Page – This is a basic navigation page. You're brought to the home page upon signing in. It allows you to select whether you want to search for specific hotels, or browse all hotels in the database.

4. Search Hotels – This page allows you to specify the hotel's name in your search, or you can filter by rating. You can navigate to the rooms in the hotel by selecting Search Rooms, or Browse Rooms.
5. Browse Hotels – This page shows information for all hotels in the database. You can navigate to the rooms in the hotel by selecting Search Rooms, or Browse Rooms.

6. Search Rooms – This page lets you filter the rooms in the hotel you previously selected by Price or Rating. From this page, you can also book the room if it is available.

7. Browse Rooms – This page brings up all the possible room choices in the previously selected hotel, and displays their information. You can also book the room if it is available.
